

## FORMADOSE DESIGN SOLUTION CREATING SUCCESSFUL TREATMENTS FOR ALL STAKEHOLDERS

**Achieving development milestones is critical to progressing your molecule to the clinic, but this doesn't always translate to successful medicines or better outcomes for patients and stakeholders. Determining the optimal dose form for your treatment is a critical decision made during drug development that can impact the ultimate success of your product.**

FormaDose Design Solution is a comprehensive drug design assessment consisting of a holistic review of the molecule, patient, and market considerations.

Led by Renejix's highly experienced team of scientific advisors, this evaluation assesses key drug design considerations that can help create more successful treatments for all stakeholders.

### A Data-Driven Approach

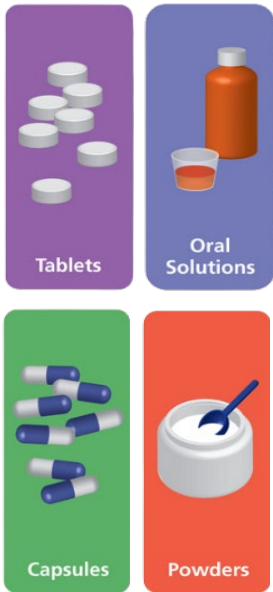

To determine the optimal dose form, Renejix's team of scientific advisors collaborate with you to review your program background and utilize a set of structured tools to perform a comprehensive evaluation.

By assessing the physicochemical properties of the molecule, ADME/PK/PD characteristics, patient considerations, manufacturability, stability, and market considerations, our team of advisors provide recommendations for a dose form strategy that can help differentiate your product, improve patient acceptance, and turn your science into commercially successful medicine.

### Maximize Your Drug Development Investment

Our scientific advisors guide you in identifying risk factors that could affect long-term commercial success and satisfy the needs of your stakeholders and achieve success in the market.

Maximize your drug development investment by driving faster development timelines with the right scale-up and dose manufacturing strategy established early in development.

## Deliver Improved Outcomes

With a wide range of advanced drug delivery technologies capable of overcoming a variety of challenges including dose loading, taste masking, drug release, food effects, etc., Renejix matches stakeholder considerations with the right solution.

Our broad portfolio of technologies can also help you create differentiated dose forms and develop a more successful treatment in the marketplace with HCPs and payers.

### ADVANCED DRUG DELIVERY TECHNOLOGIES

Fast Disintegrating  
Tablet

Immediate &  
Modified Release

Softgel

Granules &  
Powders

Oral Liquids

## Why Partner with Renejix?

**Proven Expertise** With senior leadership and operations having over 35 years in product development and commercial manufacturing, our teams combine expertise across dose forms, thousands of molecules, and advanced delivery technologies to deliver optimal dose form, scale-up and manufacturing solutions.

**Advanced Technologies** The most extensive portfolio of technologies with innovative dosage forms to best address the needs of patients and solve drug-delivery challenges.

**Comprehensive Manufacturing Solutions** End-to-end manufacturing capabilities and flexible solutions featuring CMC support, unparalleled launch expertise and integrated packaging to help speed-up timelines and reliably supply high quality products to patients.

Partner with Renejix to differentiate your product, improve customer acceptance, and turn your science into commercially successful medicine.

**YOUR MOLECULE.  
OUR MISSION.™**
